Our clinical research services team create exceptional relationships with our customers, delivering valuable insights to optimize trial data collection and ensure trials meet their research endpoints.

Our insights optimize your outcomes
With more than 13 years experience supporting clinical trials globally we can provide valuable insights from the outset of your trial to optimize your outcomes.

- Consulting
- Investigator Meeting
- System Design
- Site Initiation Visit
- Training
- Audit Support

Collaboration ensures best practice
We have worked alongside more than 165 clinical trial customers to manage the scope, costs, risks and quality of their data.

- Project Management
- Quality Control
- Notifications
- Cleansing & Curation
- Service Desk
- Refresher Training
- Individualized Support

Our review services deliver optimal data
Our data review services enable sponsors to check and validate that their data is being captured correctly.

- Data Blinding
- Independent Assessor
- Data Transfer
- Interim Analysis
- Data Archive
We provide valuable insights

Our considerable experience in clinical trials for wound and skin conditions enables us to advise you on the optimal setup for your workflows, imaging, and documentation requirements. We work with you to map your processes, assess your needs, identify efficiencies, and plan the delivery of Silhouette to meet your timeframes. Our trainers provide in-person and online technical and clinical training programs to meet your users’ needs and expectations.

We collaborate

We work with your team throughout your trial to ensure you are gathering quality data. With auto notifications and periodic checks on your image quality and measurement accuracy, we can quickly identify any issues and make the necessary changes to cleanse your dataset in a timely manner. Our experienced service desk team provide 24 hour phone support for any issues, and we can provide refresher training at any time during your trial.

“There was no room for any errors in the way we gathered or reported the data. So, having the ability to have the data checked and validated by an independent assessor was key to our decision to use Silhouette. The ARANZ Medical team were great to work with and the Silhouette system was easy to use and provided accurate information - both of these elements played important roles in the success of our study.”

Promore Pharma, Chief Scientific Officer, Prof. Margit Mahlapuu

We review your data

Our data review services enable sponsors to ensure that their data is being captured correctly with quick feedback for timely adjustments to the data capture processes if necessary.

Data blinding helps reduce the risk of bias in the data collection process. Any of the Silhouette data fields can be anonymized and extracted for review, either periodically throughout your study or on completion.

Independent assessors can be engaged to review the anonymized trial data and images. These independent assessments can then be compared against your trial data for accuracy and consistency.

Data transfers enable sponsors to review their own study data throughout a trial. Sponsors can check that their data capture is occurring as planned and resolve any issues in a timely manner.

Interim analysis involves extracting a slice of the trial data, analyzing it and reporting back to you on the status. This can occur at any time point in the study.

Data archiving occurs at the completion of a study, ensuring the study data is securely stored for your records.
